## Low water pressure Starting Technology

The direct flush system innovatively uses the first low-voltage start-up technology. The toilet has a built-in low-voltage start-up program. It is used in the case where the household water pressure is relatively low, and solves the problem that the current pressure-type flush toilet has low water pressure.

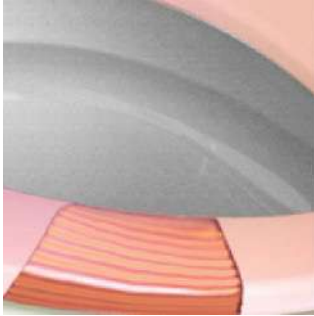

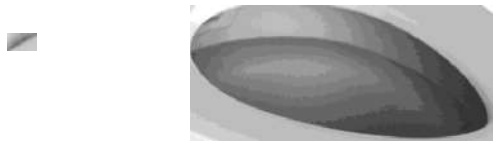

# DIRECT FLUSHING SYSTEM

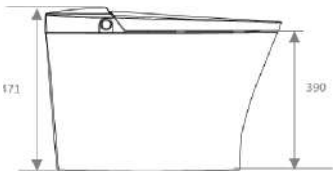

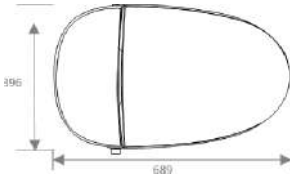

Using the Venturi principle, the Toilet sewage pipe will have twice siphonic flush, and the water and dirt in the toilet water seal will be sucked out of the pipe effectively. and the water and dirt in the toilet water seal are sucked out of the sewage pipe.
